Scripts References Category:Graphics softwareQ: Does blood of a specific animal have a certain magnetic attraction towards the animal itself? I know that the blood of a specific animal has a certain magnetic attraction to the animal's body and the blood's magnetic field will be disrupted when it enters into a totally different magnetic field. I wonder if the same applies to the blood of another animal (for example a human) or of any other object that has its own magnetic field. I am not saying that I have scientifically proven or disproven this, but if there are enough scientific or logical arguments proving this, I would be happy to have them. A: If there is a field across two regions connected by a tube of blood, the field does not change at the boundary. This is because the blood is symmetrical. That means if we see the fields in the disconnected regions, they will be identical, because they are identical halves of the blood in the tube. As a result, there is an opposing field at the boundary. The question remains what the field of the blood looks like. The way I tried to find a answer to this question was by calculating the field around a cylinder. The field can be calculated by using the Laplace equation. The boundary conditions for this are : 1) The boundary is a cylinder with radius R 2) That cylinder encloses a region with zero magnetic field outside the cylinder, and a uniform magnetic field in the cylinder. 3) The axis of the cylinder is perpendicular to the magnetic field in the area enclosed by the cylinder. The Laplace equation can be solved for the magnetic field, given a radius, a region with a uniform field, and the axis of the cylinder. I solved that for two different regions. One with a uniform field and another where a gradient of the field is present. The resulting solutions are given by :
$$\mathbf{B} = \frac{B_0}{r} \mathbf{\hat{r}}$$

$$\mathbf{B} = B_0 R^2 \tanh \frac{r}{R} \mathbf{\hat{r}}$$

$$\mathbf{B} = B_0 \mathbf{\hat{r}}$$
 The third case represents the blood where there is no field outside the cylindrical region. The results are :
$$\mathbf{B} = 0$$
