DOWNLOAD

Steps to Download and install : 1. Tap on the 'Download' button or use direct link to download. On your desktop, you'll see a folder that looks like the following: 2. Open. On a Mac: On Windows: Step 3. Extract that folder by double clicking it. . You will end up with: 3. At this point you have everything you need to generate Crossfire PH ECoins. How to get? How to make it run at once without manual? You will need to create another.conf file and enable it. Use the sample one (as copied above) as the basis for your own. Copy and paste the line from that sample file in the new file. Make sure that the properties line under the [curses] section in the new.conf file matches the properties in the sample file. If it doesn't, change them. To enable it: Open the new config file with a text editor. Add the following lines to the config: usecrossfire-2.2.0/config [curses] enableAutosave=true enableMultipleAccounts=true The properties above are defined in the sample file that you copied in Step 1. 3. Open that.conf file in a text editor. Make sure that there is a line with the properties from the file you just created. In the first part of the [usecrossfire-2.2.0] section, find the line with [curses] and add the properties above. 4. Finally, restart the Crossfire2 service: nssm restart PuTTY You may need to configure PuTTY using the settings in the following image: You will then be able to connect to the Crossfire2 server using the Crossfire2 username and password, which you can find using: wifisetup.py 5. Once connected, you can access the Crossfire2 admin page by going to the following url: 6. You can see that the Crossfire2 has finished the install successfully. ***IMPORTANT: Delete the cache/buffers before continuing. This will help keep Cross 570a42141b
