Sudden Infant Death Syndrome (SIDS) is the sudden death of an infant less than one year old that remains unexplained after a thorough case investigation. The aetiology is unknown, but a number of risk factors have been identified, including low birth weight, the presence of a smoker in the household, living with a pet, prematurity, bed sharing, male gender, maternal age >35 and the presence of a depressed mood at delivery. This paper explores the relationship between these risks factors and the incidence of mastitis and the risk of SIDS. This is a prospective follow-up study of 671 women attending a breastfeeding clinic in South East Scotland. Breastfeeding has been found to be a risk factor for SIDS (OR 2.2, 95% CI 1.1-4.4). No association was found between breastfeeding and mastitis and SIDS. In addition to the known risk factors for SIDS, this study suggests that breastfeeding may be protective. This study suggests that breastfeeding has a protective effect against SIDS and this effect cannot be attributed to mastitis. This paper also considers the limitations of the present study and future research strategies.Q: Iterate over a List in C# I have an object of type "Company" I have a collection of this object called List companies = new List(); I need to iterate over all companies and make a list of the companies in a single company. A: List companies = new List(); foreach (var company in companies) { Console.WriteLine("{0}", company.Name); } Also, if you want to display the details of all the companies in a single Company, you could use string.Join to do that. Like this: Console.WriteLine(string.Join(" ", companies.Select(c => c.Name))); If you only want a list of the companies, though, just use the LINQ methods provided by.NET. The Ants are back. Markup Import and Markup Assist is included for AutoCAD LT 2020 or later and available for Windows, Linux and Mac. You can now work on multiple documents simultaneously. Marking and annotating features in your drawings Draw with ease and easily highlight your drawing. Use the free pen tool and the free arrow tool to make and highlight drawing changes. Use the free pen tool to draw around any object or curve or highlight the distance from a fixed point. Also, use the free arrow tool to select an object and then extend its position or angle to another location. You can use these tools to highlight specific details, mark problems, or annotate a drawing with notes. The free pen tool and the free arrow tool are available for Windows and Mac. Managing and sharing your ideas and views Collaborate more easily with others by using comments and annotations. Work on a project with multiple users by creating and updating comments and annotations on your drawings. Automatically classify comments and annotations, and you can see all comments and annotations in one place. You can also click a comment or annotation to send it to the designer or change its status. Quickly import and view your work with all comments and annotations in one place. You can even upload your annotation and collaborate in the same shared view, so everyone can see what you are working on. For all other updates to AutoCAD, you can visit the Autodesk website. Q: Deleted files on remote server still showing up in desktop I uploaded a couple of very large files (12gb each) to a remote server with SFTP. The files are there, and in the directories they should be. However, when I connect to the remote server via SSH, I can see the files in a directory in my desktop (Mac OS X). I don't see them in the directories in terminal or any other applications. Is this normal behavior? I want to be able to find these files but it's still showing up in my Mac desktop? A: That is because the files are still there on the remote system, just not in your default directory because you haven't asked for them. Mac OS X by default uses the Finder to manage its desktop, so it will show the same files it will find on a local drive. If you want to be able to see the file, move it
