The most popular of these is the level of JPEG compression. You may also choose the type of compression you would like to use, i.e. B4, B5, PRED or NONE. The last choice is of particular relevance for images that contain large areas of white, which are not a problem if you need to use these images on your own webpage. In this case, you may not want to use NONE, as the image is resized to be as white as possible. Rework any image in Photoshop and email it to your friends - they'll be amazed by how good your images look. You can even batch resize images by entering a folder into the Image Optimizer window and it'll do the same for all the images in the folder and subfolders. AVOne Gold Converter is an application which you can use to convert video files to several formats, including MPEG, AVI, MP3 and ASF. It can be easily used by individuals of any experience level. This is a portable software, so installing AVOne Gold Converter is not necessary. It means that you can place the tool on an external device, plug it into any computer and directly run its executable file. What's more important is the fact that your Windows registry keys will remain intact. The interface of the program is plain and simple. Video clips can be imported into the list by using the file browser only, because the "drag and drop" method is not supported. Batch processing is allowed. In the list you can check out the split span, name and source format of each file. Once you establish the output directory and file type, you can proceed with the conversion task. But you can also modify audio and video preferences when it comes to the compression level, size, bit rate, aspect ratio and others. Furthermore, you can preview videos in a small, built-in media player, cut clips by time, size or by marking the start and end position, enable AVOne Gold Converter to render the color in the video, mirror and invert the image, and others. During conversion you can check out a progress bar along with the current step and frame, as well as remaining files and time. The video processing tool uses a moderate-to-high amount of system resources, can take a long while to complete a task, has a poor response time and its interface is outdated. The image and sound quality is generally preserved at a fair level (although the image was ruined in some cases during our tests).
