[The role of carbamoyl phosphate synthetase of the liver in the regulation of its enzymatic activity]. New findings show that phosphocreatine (PCr) in hepatocytes serves as a source of bicarbonates for hyperpolarization of cell membrane. Its main function is a supply of bicarbonates for activation of hepatic carboxylic acid oxidation and gluconeogenesis. A further role of PCr as a source of energy in the liver is discussed. The data are presented on the mechanism of activation of the enzyme studied. It was found that sodium cyanide inhibits the enzyme activity in the liver by decreasing the levels of metabolites of the enzyme and a sulfhydryl group of its active centre. Carboxylic acids used for an activation of the enzyme are decomposed by lactic acid produced during the enzyme reactions. It was a gamble, however — one that's already won the company tens of millions of dollars — but the television networks obviously hope the show will do for them what HBO's "True Detective" did for the premium cable channels in 2014. It's still too soon to know if "Insecure" will be the next big hit, but a look at the October ratings (and a recent advance season order) suggests that the audience for the show has already peaked. In a competitive late-night landscape where nearly every show is trying to be a middlebrow comedy, not many people see "Insecure" that way. Krasinski is comfortable working at the intersection between high art and high comedy, and the tone of his series — which is described by the official Tumblr account as "a hilarious, honest, dramatic and sweet exploration
