FTP=File Transfer Protocol IQBox Pro Features: Folder synchronization
Support any FTP server Support over 80 FTP protocol Support over
90 FTP protocol Support for connections using active mode Support for
connections using passive mode Support for SSL/TLS encryption Use FTP filters
Use connection bandwidth settings FTP=File Transfer Protocol Synchronization
of files and folders The folder that you've set is synchronized when you click a
button. You can even use more than one folder at the same time. To begin the
synchronizing process, use the synchronize button or click the synchronize
symbol on the bottom right corner. Synchronizing files and folders is easy.
Here's a guide to the important steps: Creating a new FTP server connection
Select a server's protocol (TCP or SSL/TLS). Set the password. Browse to your
FTP server's folder. Set the folder that you want to synchronize. Click the Sync
button. Managing a set of FTP servers Click the sync symbol in the bottom
right corner. Select "add server." Browse to your FTP server's folder. Set the
folder that you want to synchronize. Click the Sync button. Repository of
folders In the middle, you have a list of the folder you've set. Tap on them one
by one to synchronize them. FTP servers The list of the available FTP servers is
on the left. If the selected server doesn't allow SSL/TLS, you'll see a yellow
symbol in place of the FTP server. FTP connections The list of the available FTP

connections is on the right. To select an existing connection, you can go up or down to find your desired FTP connection. You can delete or rename a selected FTP connection by tapping on it. FTP filters IQBox Pro provides you with a list of filters that you can use to synchronize files and folders. A filter is defined as a folder name and a password that you can set. The first parameter can be a string value and the second must be a string value. FTP filters can be changed according to your needs. You can use filters to synchronize specific folders or entire file systems. b7e8fdf5c8
