Python Python is a high-level, general-purpose, interpreted, dynamic programming language. Python has been shown to be highly effective for integration with AutoCAD. It is also popular among people new to CAD and CAD programming due to its use of logical thinking, and its simple and consistent approach to problem solving. Python is part of the Autodesk Architectural Desktop and product offerings. Python is also used for scripting in other Autodesk products. Visual LISP Visual LISP (VLISP) is a visual scripting language used in AutoCAD for creating macros and functions. Visual LISP (VLISP) is only available in AutoCAD. VLISP allows developers to create custom functions. ObjectARX AutoCAD's ObjectARX is an add-on class library that supports 2D programming. This allows programming in C++ using ObjectARX classes. This allows

the programmer to use the full power of Visual Studio, and use C++ programming techniques. ObjectARX can be used in conjunction with AutoLISP,.NET and Visual Basic. Visual Studio AutoCAD uses a visual development environment called Visual Studio. This allows users to write and test applications in Visual Studio and deploy them to AutoCAD. History AutoCAD was first released in 1985 as a drawing package. Initially it was created by J. Marcus since 1985, and was then officially released on January 14, 1987. The early releases were available only for MS-DOS and IBM PC compatibles. After the introduction of the Windows 3.0 on January 23, 1990, AutoCAD for Windows was released. The primary version numbers in AutoCAD's history are 'y' and 'z'. In November 1993, 3D capabilities were added, followed by sheet metal and perspective. In 1995, drawings imported from other CAD software such as Microstation were imported into AutoCAD. In 1996, AutoCAD introduced the ability to draft to sheet metal. In the same year, AutoCAD also introduced reverse engineering. Also in 1996, AutoCAD introduced 3D editing. In 1996, functionality for drafting to sheet metal and reverse engineering were incorporated into AutoCAD. In 1997, all AutoCAD files were saved in the double-byte Unicode UTF-16 format, although this format was not supported by earlier versions of AutoCAD. In the same year, AutoCAD introduced in-place editing and af5dca3d97

I'm using Sublime Text and I'd like to know how to quickly move a selected range of lines to a different file. Currently I'm just using the "Goto Definition" command and then pasting the result into the other file. I'm wondering if there's a better way to accomplish this. A: I think what you're looking for is an "Extract to Clipboard" action. In the Edit -> Actions menu, that command is CTRL-SHIFT-G. You can also set up an action to extract the selected lines to a new file in the "Goto Definition" command. The extract to clipboard action can be set up as any other command. For example, you can put the following in the JavaScript view (javascript.sublime-build): { "cmd": ["command_name", "--select=%select", "--extract_to_clipboard=%clipboard"], "selector": "source.js", "remove_selected": false, } Of course, you can also make a regular text selection from the command palette or by typing ctrl-shift-I. Q: Javascript for loop to generate lists I'm trying to write a function which will generate empty lists (array). I have only been able to generate empty arrays one at a time. So far, this is what I have: var start = {a:10, b
