CopyTrans v4.842 crack CopyTrans v4.842 keygen Download and run a file from the Internet.1. Field of the Invention The present invention relates to a semiconductor integrated circuit, and particularly relates to an interface circuit between an integrated circuit which is a microcomputer and a peripheral circuit such as a communication circuit for transmission and reception of data with respect to an external circuit. 2. Description of Related Art In the related art, a number of devices have been proposed to form a microcomputer in an integrated circuit (IC). Examples of such devices are disclosed in Japanese Patent Laid-Open No. 64-26911 and Japanese Patent Laid-Open No. 2001-166685. FIG. 1 is a block diagram showing an example of the microcomputer disclosed in Japanese Patent Laid-Open No. 64-26911. As illustrated, the microcomputer includes a CPU 41, a non-volatile memory 42, and a RAM 43. The non-volatile memory 42 has a function to hold data in even when power is not supplied. A read-only memory (ROM) or a mask ROM, for example, is used in the non-volatile memory 42. The CPU 41 reads input data and executes processing according to the input data. The RAM 43 is a volatile memory which stores data to be used while the microcomputer is in operation. The RAM 43 is also used for the purpose of storing instructions for controlling the CPU 41. The inputs and outputs to the CPU 41 and the RAM 43 are provided by an input/output circuit 44. The input/output circuit 44 is provided with an input buffer circuit for enabling data to be input to the CPU 41 and with an output buffer circuit for outputting data from the CPU 41 to an external circuit. FIG. 2 is a block diagram showing an example of the interface circuit of a conventional microcomputer. As illustrated, the interface circuit of the conventional microcomputer includes a data buffer 51, a column address buffer 52, and a row address buffer 53. The data buffer 51 is provided for holding data that has been received from a peripheral circuit (not illustrated) and is to be transmitted to the CPU 41. The column address buffer 52 receives an address from a column circuit (not illustrated) and is provided for holding a column address. The row address buffer 53 is provided for holding an address from a row circuit (not illustrated) and is provided for holding a row address. FIG. 3 is a 6d1f23a050
