If you have questions or comments about the email you just received, please contact us at: info@PhDgroup.comQ: why is k() still returning a function as a function? I'm currently trying to learn how to use kdb+ to solve some problems, but after changing my code a few times I still cant figure out why k() is returning a function as a function, yet every other function I use returns a data. A: From Wikipedia: k() and k() k() operates just like k except that it assumes the form of a function of one argument. If the c6a93da74d
