Q: Create a custom Workbench for TFS Git repository I'm currently looking for the (best?) practice to organize my code in a TFS Git repository. Usually, I use a Git project inside a Team Foundation, but now I'm looking for a different solution. My initial approach was to use the Git Workbench TFS to be able to connect to the (TFS) Project Server and all that. But I think this is going to be quite an overkill for not that much code organization. Now I'm looking for a different approach. Should I create a custom workflow (like the Git Workbench TFS) and use it for my repository? A: The answer is no. The TFS git workbench is a proxy between Git and TFS. It really should be open sourced. But I think the team at TFS does not want to get involved with the open source world. If you really want to use git without a TFS project, you need to do some plumbing. In my opinion, your best best is to use an nuget (link to nuget) of the git tools and use that. But I don't think nuget should really be used for anything but npm.

Otherwise, it may end up in a feature freeze. You can either use the official dotnet, azure-git, etc tools. If you are going to rely on the TFS git workbench to access the TFS storage, you will be ready to ask that question when the TFS git workbench is open sourced. Remember, when you are using TFS for git, it is not really doing the actual network IO or anything. It is more of a coordinating tool that is open source. 5ec8ef588b
