Once your workflow is set up and your training complete, pull out your camera, get some images down if you can, and make some prints. Printed photographs are a great way to see results from your images and to see which version you still need to log into the product again. Both the preview and the frozen frames are regular previews in Lightroom 6, with the following difference: Previews have real-time updates to the image, while the frozen frames give you the final version of the image and may have prohibited adjustments made by the user. Un-worrying and un-terrifying. The product looks almost exactly the same as it did in 2013, but it provides a more mobile-focused and responsive interface. This no longer feels like a product that's a transaction-based transaction using an application designed during the dark ages. (Maybe that's how it should be!) Look and feel is consistent across the board. The best news is that the menu bar is once again home to tools, and the Library menu has been expanded to include a "Save for the Web" menu, which supports about 90 file formats. The Save for Others and Save Actions menus have been improved somewhat, and the Download JPEG function has been revamped. ZIP files are now the first choice for exporting from Lightroom. You can use remote sharing to upload files to Dropbox or iCloud Photo Library, and Adobe has included a feature called Dropbox Match that automatically happens when you open an image in Photoshop that is uploaded to Dropbox.
