After the creation of a new catalog tree for the user, a good 50% of the time is spent in organizing images based on the location where they were shot. This typically is a very welcome improvement in the previous version, but getting images into a new folder can still be cumbersome at times. A feature that has been added to the Import dialog is the "Upload to a separate catalog" option, which will upload images directly from the camera roll without leaving the program. Lightroom can automatically sort your images, but that's just the start. Once again, the intelligent settings set by the user can determine how each image will be sorted, allowing for great flexibility. The side panel may look a little different than previous versions. Any filter settings that apply to the images in a selected folder will appear here, along with what is oriented to the left or right of this and the selections made on images by the user. Clicking the share button will allow you to directly share the images on social media sites. To do so, simply go towards where you would like to share the image and select an option from Facebook, Twitter, Pinterest, and Instagram. One of the more drastic changes in Lightroom 5 is the new Creative Cloud edition. Previously, Lightroom was sold in a product called "Adobe Lightroom". That works just fine if you're a designer looking for a program to catalog b&w and color stills. But, if you're a photographer, it's rather shocking that Lightroom is now made available only as part of the Adobe Creative Cloud suite. However, it is indeed entirely possible to upgrade your existing Lightroom installation to that of the Creative Cloud edition and not waste time on the upgrade.
