It's pretty simple to upgrade a Photoshop (or Photoshop Elements) software on your existing computer or laptop. Simply download the latest version from your favourite software retailer's website or the Adobe website and run the installer. Because many different types of computers will need a different version of Photoshop depending on their capabilities, expect to pay more depending on the type or brand of computer you own. The new Automated Targeted Update feature, which is still in beta, will allow you to update several, possibly all, of your computers at once. Don't worry about any additional costs, it's free. Once the upgrade is done, do not delete your existing Lightroom edition. You will have a new one and you will need to migrate over all your old projects if you want to start using the new version. The new features are great. It's like Apple with its macOS Sierra, yet totally different. The developer has paid attention to the feature sets of all the other software and products these days. The places where I had complaints with previous versions, such as the functionality of the grid tool, are now much better. But what I found most interesting is that Lightroom has become so feature rich without losing the ability to perfectly edit an image. One of the most significant new additions is what Adobe calls the "Accelerated Targeted Updates". Using this feature, you can pre-schedule updates to all your Adobe software across an unlimited number of computers. I haven't tested this feature as of now. But if it's true, then it will allow you to update all your Adobe software using only version 5.0 of Lightroom. If previous versions allow you to select the computer and date, then you will need to pre-select each computer manually so that it can be updated.

In June 2018, Adobe announced that it would expand its Creative Cloud subscription service to also include life-time updates to Photoshop. This, along with its gradual transition from Windows and macOS-based desktop software, should make it easier for users to keep their work backed up in one place no matter where they are. However, even though it is free, the web-based version of Photoshop requires some adjustment to work well. Adobe's new web-based Photoshop works alongside the desktop version of Photoshop and is very similar to the desktop version, offering the same functionality for both accounts. It also only works from Chrome, not other browsers, unless the user loads Chrome extensions for them. This can be annoying if the user is using a Chrome extension, such as a password manager, for other services. However, even though it is free, the web-based Photoshop requires some adjustment to work well. The first thing that users will notice, besides the lack of an interface, is the performance. Even with the Chrome extension, it's not possible to use Photoshop normally. Users will have to wait for Photoshop to load, update the canvas, and then start editing. While this version of Photoshop works well with light to medium editing, it's not possible to edit large canvases. Editing large canvases will create big files, and large files are slower to open and update. To improve the editing process, Adobe set up a new cloud-based service: **AI-powered WorkSpace**. This is a local repository of content that can be accessed in the cloud. Essentially, this means we will have an all-in-one editing workspace that can keep our files in sync. e3d0a04c9c

Sent to the dustbin of Photoshop, such features as layer styles, content aware fill, content aware smoothing, and edge enhancers are all gone. While some of its 3D capabilities have been port to new native APIs, Photoshop has taken an all-new approach to creative tools (The New Photoshop, March 17th, 2010). Now you're getting a native Mac version at the same time as the Windows release. The new Photoshop, which arrived on World Computer Day, November 12, is itself a celebration of the very best of digital imaging technology. And it's the most powerful on the market. Photoshop slashes the cost to produce professional-quality images. It is our intention to retire the 3D features in Photoshop as a result of efforts within the broader team to bring 3D to the Creative Cloud apps. The Adobe Creative Team desires to provide a more unified experience across the Creative Cloud apps as they bring more 3D aspects to our Creative Suite users. In addition to offering 3D for our customers, now we will be investing further behind the scenes to help make life easy for our customers to use 3D in all the ways they need to. With that, we are dedicating our resources and efforts to our new natively supported advanced image editing app, Photoshop. Both products will be 100% fully functional and feature-complete through the update. As a result, we are retiring the 3D edit mode. Subsequent updates also include a complete rewrite of the UI to make it clear when we are in native 3D mode, and when our native 2D tools such as brushes, layers, filters, and adjustments are used in a 3D space. You'll see more details in the upcoming blog post, and of course, we'll continue to keep you informed as to future updates.
