Each extension has its own advantages and limitations, and would depend on the type of project and how much time you have to create. With a lot of options, it's difficult to select a program just for beginners. The most appropriate version for you would depend on your particular needs. **First of all you need to understand certain things:** Photoshop CC is/was a Creative Cloud service that provided you with a monthly subscription and an online storage space for your projects. Adobe used to charge a €7/month fee for this service to the end users of the software. In other words, if you were to pay a monthly fee for the regular license of Photoshop, you would also have been charged the €7/month fee as well. However, the subscription guarantees you a monthly service and many other perks that can't be easily offered by the regular licensee. Since the regular license gets you to "lock-in" your subscription, just 16 of the free extensions are available with your regular license and you won't be able to access all of them from the regular copy of the software. This is disastrous for the beginner. If you are a beginner, then it would be better to get a regular Photoshop license and the full set of extensions for free. If you want to remain a member of the Creative Cloud service, then you will have to renew your subscription every month. If you don't renew your subscription, then all your creations are gone and you will not be able to access them unless you paid the €7/month fee in the first place. e3d0a04c9c
