What may have been a bun fight to see which platform will *win* is now secondary. The primary goal is to create a slick, clean camera RAW workflow, while still providing desktop and mobile editing tools. In most cases, the mobile edits are good, if not excellent, but if you're working with the iPad or iPhone on the go, it would be nice to have a more basic clip board. On the other hand, the same clip board enhancement is available on the desktop for those who like doing a lot of editing in the desktop environment. Editor, recent update, although it's hard to see what's new in it. A lot of \"pedestrian\" enhancement though not really much that's revolutionary for Photoshop. It's very easy to understand and too easy to operate. Of course they have added some things that would make it more interesting, but the performance remains bad.

The company has now released a standalone sequel for Photoshop Elements:

Adobe Sensei is the name given to the newest generation of artificial intelligence (AI) which enables the power of machine learning and deep learning to automate image recognition. AI enables machines to make sense of the world around them. Adobe Sensei is a platform that gives engineers and developers authoring skills for customer experiences that go beyond mere automation and may include voice, facial, gesture, and visual recognition. You may have seen these technologies embedded in your apps recently as seen in the Photos app: From automatic duplicate-removing, to image stabilization (Shift) before and after photo-taking on the iPhone X, and all in one, high-quality canvas. Sensei can now detect, recognize and read your photo content; caption your photo; and contextualize your smartphone in real time. Black-and-white images, with a single click of the Generation in the Adjustments panel, now have the capability to automatically generate a high dynamic range (HDR) version, without the need for multiple exposures. This generation process is one of the new capabilities in Photoshop that uses Adobe Sensei. Additionally, if you edit a photo in the application and save it out as a web photo, Sensei will intelligently bring in metadata, while preserving much of the existing file for perfect viewing on a web feed.
